DETAILED ACTION

1. Claims 10-15 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 3/11/2005.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

1. Claims 1-9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kaufman (#5,201,164) in view of Foster et al (#6,063,226). Kaufman substantially shows the claimed subject matter including unwinding a supply roll (col 2 lines 35+), dispensing solution onto the sheet. Kaufman discloses a preferable method is using perforated tubes for wetting the sheets (col 2 lines 50+). Kaufman discloses that the sheet is slit into eight ribbons and folded into a z-fold configuration as an example (col 2 lines 60+). Kaufman discloses slitting the sheet and wrapping the folded webs by combining sheets into a sausage. The eight continuous webs are read on the eight ribbons slit. Kaufman does not show the s-wrap rollers or folding plates as claimed. However, Foster et al show the use of S-wrap rollers 54, 55 which feed the material evenly and continuously through the system (col 3 lines 60+). It would have been

obvious to one of ordinary skill in the art at the time of the invention to provide Kaufman with S-wrap rollers as taught by Foster et al to feed the material evenly and continuously. Regarding the folding plates and type of fold configuration, such as, C, W or e fold configuration, the examiner takes official notice that it is well known in the art to use fold plates for folding as well as to form the particular fold configurations as claimed. Kaufman discloses that the liquid add-on was a certain weight percent based on the dry weight of the basesheet. Kaufman discloses that after the basesheet has been impregnated with the desired amount of liquid (col 2 lines 55+), the sheet is slit. This infers that the basesheet is weighed with the correct amount of solution on it. Furthermore, it is well known in the art to weigh articles to reach predetermined weights. Lastly, it is well known in the art to manufacture optimal speed ranges and to control flow rates and to use control systems as claimed to monitor flow rates as claimed.

2. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
